

## **ABSTRACT**

**This presentation aims to demonstrate the impact of research on linguistic studies developed in a doctoral thesis (WANDERLEY, 2017) and article (STUMPF and WANDERLEY, 2016) on SignWriting in Brazilian Sign Language (Libras).**

**Based on the SignWriting system developed by Valerie Sutton (1974), SignWriting in Brazil is used by the deaf community in publishing articles, books, leisure activities, etc.**

**The thesis and article aim to analyze textual production in SignWriting through grammar and convention in the book "oral health", focusing on occurrences, especially verbal morphology and plural marking (ARONOFF, MEIER and SANDLER, 2005 ; HAAPANEN and WAINIO, 2010) and in plural marking (BATTISON, 1978).**

**The analysis of the book "oral health" as teaching material for deaf people, with Portuguese, SignWriting and video in Libras, of any age, aimed at tooth care, demonstrated the inclusion of grammar and convention in SignWriting.**
